Precision and functionality for safe local anaesthesia

Trust is essential in the dentist-patient relationship, and your success is often achieved by offering your patient a comfortable experience. Using safe and precise instruments can help you handle their fear and discomfort. Prestoject Dental Syringes are our solution for a successful dental anaesthesia procedure.

PRESTOJECT DENTAL SYRINGES FEATURES

- Manufactured with stainless steel for long-lasting performance
- Highly resistant to cleaning agents for enhanced longevity
- Ergonomic design for secure and comfortable grip
- Compatible with 1.8ml dental cartridges and metric thread needles
- Various aspiration options available
- Endorsed by Inibsa's expertise in dental pain control management

PRESTOJECT Dental Syringes

PRESTOJECT CW

- Cartridge syringe with **craw tip**
- Thumb ring
- For flat and hollow plunger cartridges
- Fast and easy side loading
- Manual aspiration
- Suitable for thermal disinfection and 134°C sterilisation

PRESTOJECT HK

- Cartridge syringe with three **hooks tip**
- Thumb ring
- For hollow plunger cartridges
- Folding mechanism loading
- Manual aspiration
- Suitable for thermal disinfection and 134°C sterilisation

PRESTOJECT FL

- Cartridge syringe with **flat tip**
- Thumb bar
- Fast and easy side loading
- Safe cannula guide into the ampoule
- Self-aspirating: Aspiration is accomplished by easing the pressure on the piston
- Suitable for thermal disinfection and 134° C sterilisation

PRESTOJECT IL

- Syringe for **intra**ligamental anaesthesia
- Cylinder secured with an easy to use bayonet catch
- Anti-bursting sleeve
- Treble window for optimal control of the anaesthesia cartridge consumption
- Suitable for thermal disinfection and 134°C sterilisation.

PRESTOJECT Safety Stand

- Reduces the risk of injuries or contamination
- Heavy stainless steel for a safer handling
- For safe needle recapping and holding
- For syringe holding during treatment
- Mechanical locking retainer and releasing push button
- Suitable for thermal disinfection and 134° C sterilisation
